Education

ETH Zürich — Zürich, Switzerland
MSc in Statistics — *Sep. 2025 – Jan. 2028*
Elected representative for 100+ MSc Statistics students

University of Glasgow — Glasgow, UK
BSc (Hons) in Statistics, First Class — *Sep. 2022 – Jul. 2025*
Best Graduate, School of Computing Science, Mathematics & Statistics

University of Bologna — Bologna, Italy
BSc in Statistical Sciences, 110/110 cum laude — *Sep. 2022 – Jul. 2025*
Double-degree program with Glasgow; Top 1%

Experience

World Radiation Center — Davos, Switzerland
Research Intern — *Sep 2026 – present*
- Developing a novel spatiotemporal gap-filling model for outgoing longwave radiation (OLR), integrating 5 years of CLARA satellite observations with ERA5 reanalysis data across spatial grid cells to reconstruct missing climate measurements.
- Evaluating reconstruction accuracy on held-out observations, achieving 4 W/m^2 RMSE and 63% improvement over baseline to support more reliable estimation of Earth's radiation budget.

United Nations Office for Disaster Risk Reduction (UNDRR) — Bangkok, Thailand
AI Engineering Intern — *Feb. 2026 – Aug. 2026*
- Adapted Google Research's Groundsource pipeline into a multi-hazard LLM extraction system using Azure AI, processing 10,000 UNDRR documents into 3,572 structured disaster-event records across 24 hazard types.
- Designed a human-annotated evaluation framework, achieving 95.1% event-detection F1 and 86.0% attribute-extraction F1; preparing the pipeline for transfer to UN member states.

ETH Zürich — Zürich, Switzerland
Student Researcher — *May 2026 – Sep 2026*
- Developed multi-fidelity Gaussian-process surrogates for exoplanet atmospheric retrieval, combining 10,000 low-fidelity and 97 high-fidelity simulations across 195 spectral wavelengths; achieved 0.435 normalized RMSE and 86.9 ppm MAE in high-fidelity cross-validation, an improvement of 17% over baseline models.

Public Health Scotland (NHS Scotland) — Edinburgh, UK
Data Science Consultant — *Feb. 2025 – Sep. 2025*
- Analyzed 1M+ patient records across 11 hospitals, applying queueing theory and ML optimization to identify bottlenecks in emergency healthcare access. Developed resource-allocation models achieving a 27.21% reduction in Edinburgh patient demand burden in the evaluated scenario.

University of Glasgow — Glasgow, UK
Undergraduate Student Researcher — *Jan 2025 – Jul 2025*
- Co-developed a robust multi-fidelity Gaussian-process model integrating 14,344 air-pollution observations from 30 monitoring stations, reducing mean cross-validated prediction error by 69% relative to classical multi-fidelity GP.

Awards & Recognition

BainHorizon mentee — selected for Bain & Company mentorship program
Lead The Future — mentee for non-profit organization for excellent Italian students in STEM ($\leq$ 20% acceptance).
Royal Statistical Society Prize — awarded as Best Statistics graduate of the University of Glasgow.
Ede & Ravenscroft Prize — most distinguished graduate of the School of CS, Maths & Statistics, Glasgow (top 0.25%).
Winner, Operational Research Challenge, Uni of Edinburgh (2025) — best project and pitch among 200 competitors.
Finalist, National Ancient Greek Olympiads (2022) — Top 30, selected from 5,000+ submissions (top 0.6%)

Technical Skills

Programming: Python (pandas, PyTorch, sklearn), R, SQL, MATLAB, LaTeX
Languages: Italian (native), English (C2), Spanish (B1), German (A2)
